## FORK TILT LEVEL INDICATORS

An incorrect tilt angle of a lift truck's forks is the leading cause of damage to pallets, racking and merchandise. Even the most experienced operators have difficulty judging the correct fork tilt when placing pallets high onto racking. That's why Accu-Tilt displays the fork level at all times to prevent damage and increase productivity by eliminating the guess work.

Additionally, the Accu-Tilt's fork tilt level indicator also specifies the correct fork angle to use when moving a load and when parking the lift truck. This valuable device is easily installed on all makes and models of forklifts and lift trucks.

## ALUMINUM DOCKPLATES

Skid resistant safety tread deck. Bevelled edges allow smooth access from either end. Bend at upper end permits both ends of plate to lie flat. Steel legs fit between dock and truck; prevent movement when in use. High tensile aluminum alloy construction; no welds to break.

### HOW TO ORDER:

1. **Select dockplate width:** add 12" to width of equipment to be used on dockplate.
2. **Determine height differential:** (the vertical distance from dock floor to truck floor) The height differential decides the necessary plate length.
3. **Select the necessary capacity.**

#### Above Dock Level

## ALUMINUM DOCKBOARDS

Ideal for truck or rail applications. Curb design adds strength and prevents equipment run-off. Skid resistant safety tread deck. Bevelled edges allow smooth access from either end. Bend at upper end permits both ends of plate to lie flat. Steel legs fit between dock and truck or railcar, prevent movement when in use. High tensile aluminum alloy construction.

### OPTIONS: FORKLIFT HANDLES

Makes movement of heavy boards and plates easy and safe. Recommended for boards and plates over 140 lbs. Sold in pairs.

Model No. KH191  
Price/Each \$195.00

### HOW TO ORDER:

1. Determine required capacity: 90% of gross weight for forklift trucks; 67% of gross weight for powered pallet trucks. Example: Wt. of Forklift + Wt. of Heaviest Load = Gross Weight x .90 = Required Capacity (5 500 lbs. + 10 000 lbs. = 15 500 x .90 = 13 500 lbs.)
2. Select dockboard width: add 12" to width of equipment to be used on dockboard.
3. Determine height differential (the vertical distance from dock floor to truck floor).

# DOCK EQUIPMENT

## HOW TO CHOOSE A CABLE PROTECTOR

### WHY USE CABLE PROTECTORS

- Protect your cables, cords, and hose lines from pedestrian traffic, vehicle and heavy-duty equipment movement
- Ideal for festivals, construction sites, conventions centers, and any event or facility
- Cost-effective solution helps prevent damage caused by wire vibration, contact with other heat producing equipment or simply from tripping
- Improve accessibility
- Cable protectors are offered in a variety of size, material and colour to suit all types of applications.

## WHAT TO CONSIDER

### 1. SIZE – HOW MANY CABLES DO YOU WANT TO PROTECT?

- Protect 1,2,3,4, and 5 cables using the same protector, each slot is known as a "Channel"

#### What you need to know

- Know the overall diameter of your cables: Make sure that your cables will fit into the cable protector by choosing the proper channel width and height

#### General Rule to Remember

- Remember that as the number of channels on the protector decreases, the channel height will increase

#### Is your vehicle clearance height limited?

- Low profile and drop-over models are a quick solution to protect your cables while allowing low vehicle, pedestrian walking, and handicap access

### 2. LOAD CAPACITY - WHAT WILL BE CROSSING OVER THE CABLE PROTECTOR?

- With capacities up to 800000 lbs. per axle (load that a vehicle will put on a cable protectors as they drive over them), cable protectors can withstand thousands of pounds and endure constant impact
- Heavy-duty cable protectors are ideal for vehicles or hauling trucks and light-duty cable protectors are best for light to heavy pedestrian walking, light commercial and utility applications

### 3. CONNECTOR TYPE - INTERLOCKING DESIGN FOR EASY SETUP AND DISASSEMBLE

- Connect multiple units together to create your desired length

### 4. ACCESSIBILITY RAMPS & RAILS

- Most of Checkers® Cable Protectors offer ADA/DDA compliant access ramp

### 5. MATERIAL

#### Polyurethane:

- Heavy-duty to general purpose applications
- Ideal for heavy-duty equipment and high volume traffic
- Oil gas, mining, military, construction, entertainment, manufacturing, and material handling
- Light weight and more durable
- Withstand extreme weather conditions

#### Rubber:

- Light-duty applications
- Ideal for pedestrian traffic and light vehicle traffic
- Office, light industrial, entertainment

### 6. COLOURS

- Universal safety colours are available for all types of traffic
- High Visibility Colours Include: Yellow, Orange, Black, and Blue

### 7. NEED ACCESSORIES?

- Adding accessories to your cable protectors depends widely on placement and positioning of your cable protector system. Most cable protector series offer accessories such as: End caps, 45 degree left and/or right turns, 4 and 3-way cross intersections

## LINEBACKER® CABLE PROTECTORS

- Most robust cable protection option
- High load bearing capacity for heavy equipment applications
- Ideal for: Manufacturing, Oil and gas, mining, military, construction and heavy-duty applications
- Protects cables and hoses
- All-weather polyurethane construction
- Easy to transport, setup, disassemble, and store
- Thick lid and base allow for high volume of traffic
- Modular interlocking design

## CASTER SELECTION GUIDE

### 4 FUNDAMENTAL FACTORS TO CONSIDER

#### REQUIRED LOAD CAPACITY

This is the most important criterion for caster selection. Each caster should have the capacity to support one-third of the total load weight, because overloading, uneven floors and load distribution may place a heavier burden on one or more casters.

#### MOBILITY NEEDS

The larger the wheel size (and swivel radius), the greater the mobility. The type of bearing selected will also improve mobility and reduce rolling resistance. Neoprene, elastomeric, and urethane wheels offer maximum mobility.

#### FLOOR CONDITIONS

What are your floors like? Check for rough or uneven surfaces—joints, grates, potholes—and for oil, grease and solvents or a variety of other chemicals or contaminants. In addition, note any carpeted areas or areas where non-marking qualities are critical.

#### ENVIRONMENTAL CONDITIONS

Check for dust, humidity and temperature extremes. Are the floors littered with debris? Casters with sealed swivels are ideal in areas with sprays or wash-down requirements where there is lint or dust and where extreme quiet is essential.

#### WHEEL TYPES

**Soft Rubber:** Offers a smooth, semi-cushioned ride with good floor protection, but can leave black marks on floors. Wears on rough surfaces and can become brittle if left exposed to the elements. Standard colour is black.

**Hard Rubber:** Economical, easy rolling and durable wheel with adequate impact strength, hard rubber can hold more weight than soft rubber and doesn't mark the floor as easily.

**Mold-On Rubber:** Offers a semi-cushioned ride, rolls over debris and on uneven surfaces. Tread is soft black rubber that can mark. Performs well on lighter applications but doesn't handle overloading very well.

**Pneumatic:** Have an outer tire with an inflatable tube, mounted to a metal rim assembly. The inflatable tire offers an exceptional cushioned ride, is light weight and has a great diversity of applications. Limited weight capacity, punctures and marking rubber are disadvantages to consider.

**Semi-Pneumatic:** Natural black rubber tread on a polyolefin/plastic hub and come standard with ball bearings. These wheels are used in many of the same applications as the full pneumatic wheels, but have the advantage of not going flat.

**Polyurethane:** Non-marking, popular, lightweight, durable and versatile wheel. Long-lasting tread mechanically bonded to an aluminum core, wears well and are impervious to water (including salt water), resistant to oils, grease, most solvents and chemicals, typically used in commercial, industrial, institutional and food service applications. Offers excellent manoeuvrability, semi-quiet ride, adequate floor protection and good capacity ratings.

**Polyolefin:** Very durable, inexpensive, holds high capacities, has high shock load impact strength, is sanitary and is impervious to water, resistant to most oils, grease, chemicals and solvents, is non-marking and most of our polyolefin wheels have a slight crowned tread, which offers good roll ability. Great for most applications not needing a cushioned ride and that will not be exposed to heat.

**Phenolic:** A very hard, durable and versatile wheel. Of all of the hard surface wheels (compared to steel) it provides the best floor protection and is quieter. Good roll ability and are very popular wheels in the industrial, manufacturing, warehousing and bakery industries. Resists oils, grease, gasoline, and most commonly used chemicals and intermittent water exposure. Not recommended for continuous wet applications.

**Hi-Temp "Lava" Nylon:** Will not crush under heavy loads. It is good for use on all sorts of surfaces from wood to concrete. Will tolerate temperatures from -43°C (-45°F) to 246°C (475°F) and is not affected by most corrosive chemicals.

## ROTARY LOBE PUMPS OVERVIEW

Lobe pumps are popular in diverse industries because they offer superb sanitary qualities, high efficiency, reliability, corrosion resistance and good clean-in-place and sterilize-in-place characteristics.

Rotary lobe pumps are non-contacting and have large pumping chambers. If wetted, they offer self-priming performance. A gentle pumping action minimizes product degradation. They also offer reversible flows and can operate dry for long periods of time.

### Advantages:

- Pass medium solids
- No metal-to-metal contact
- Superior CIP/SIP capabilities
- Long term dry run (with lubrication to seals)
- Non-pulsating discharge

### Wetted components:

Aluminum, Buna-N, cast iron, chrome plated, polypropylene, steel and zinc.

- For use with most low viscosity and non-corrosive petroleum based fluids
- Dual directional operation for rapid discharge
- Fits 55-gallon drums with a 2" bung adaptor
- Transfer Rate: 1 L per revolution

**Model No. DC111**

# PUMPS

## ROTARY TYPE DRUM PUMPS

### ROTARY VANE PUMPS OVERVIEW

While vane pumps can handle moderate viscosity liquids, they excel at handling low viscosity liquids such as LP gas (propane), ammonia, solvents, alcohol, fuel oils, gasoline and refrigerants. Vane pumps have no internal metal-to-metal contact and self-compensate for wear, enabling them to maintain peak performance on these non-lubricating liquids. Vane pumps are noted for their dry priming, ease of maintenance, and good suction characteristics over the life of the pump.

#### Advantages

- Handles thin liquids at relatively higher pressures
- Compensates for wear through vane extension
- Sometimes preferred for solvents, LPG
- Can run dry for short periods
- Can be equipped with a gasket or a stuffing box
- Develops good vacuum

# PIPE FITTINGS

## PIPE FITTINGS

There are many variations of fittings to suit a wide range of applications, providing the versatility to achieve any structural configuration. Kee Klamp® fittings are galvanized malleable iron castings designed to suit eight sizes of tube. A standard hex key and tube cutters are the only tools required to create strong, rigid structures. Recessed set screws, tightened by the hex key, firmly lock the tube into the fitting. The set screw is manufactured in case hardened steel and is coated to protect against corrosion.

### KEE KLAMP®

- Simple method of constructing tubular structures
- Cost effective alternative to welding
- Galvanized to resist corrosion

# ENCLOSURES & GUARDS

Rugged Kleton wire mesh partitions and enclosures provide maximum security at a minimal cost. It is ideal for the storage of tools, valuable inventory, hazardous materials and any area of your plant where restricted access is required.

Wire mesh panels permit full visibility and allow for unrestricted circulation of air, heat and light, providing an ideal storage facility.

- 2" x 2" x 10-gauge wire mesh
- 10-gauge frame (stiffeners included on all applicable sizes)
- Pre-drilled modular components allow for quick and easy installation
- Durable Kleton blue or safety yellow finish (Other colours available)

## WIRE MESH PARTITION COMPONENTS

Everything necessary to create your own custom enclosure. Fast and easy assembly, multiple sizes available. Please follow these guidelines for determining the components required.

### 1. UNIVERSAL POSTS

A post must be placed at each end of every panel (or of every stack of panels). Be sure to calculate an extra 2" of overall wall length for each post added. When a post meets an existing wall, add one **KD115** wall bracket for proper support (fasteners are included with **KD115** to mount to post, not to wall).

Universal Posts

Blue Model No.	Price /Each	Yellow Model No.	Price /Each	Height	Wt. lbs.
KD053	79.95	KH860	79.95	8' 3"	22

KD050	159.00	KH923	195.00	12' 3"	32

### 2. PANELS

Whenever possible, stacking panels horizontally (one above the other) is more economical than placing them vertically (next to each other) - this is because fewer posts are required for wall support when panels are stacked.

**Examples:**

- For an 8' high partition, stack two **KD037** (8' x 4') panels horizontally
- For a 10' high partition, stack two **KD037** (8' x 4') and one **KD033** (8' x 2') panel horizontally
- For a 12' high partition, stack three **KD037** (8' x 4') panels horizontally

### 3. ADJUSTABLE FILLER PANELS

Adjustable filler panels fill in blank spots on the ends of wire mesh partitions to plug up potential security risks. Filler panels come in two sizes: 1' x 4' and 1' x 8' that slide over the ends of existing wire mesh sections. Bolt holes on the filler panels are separated per every inch and allow the filler panel to fill in a space between 6" and 10" wide. The holes line up with holes on the existing panel which are drilled in at the top and bottom to securely fasten the filler panel in two places.
