## Earplugs Fitting Instructions

Keys to Successful Hearing Protection with Earplugs

<p><b>1 Disposable</b></p> <p>Roll-Down Foam      MAX®</p> 	 <p>With clean hands, roll the entire earplug into narrowest possible crease-free cylinder.</p>	 <p>Reach over your head with a free hand, pull your ear up and back, and insert the earplug well inside your ear canal.</p>	 <p>Hold for 30 - 40 seconds, until the earplug fully expands in your ear canal. If properly fitted, the end of the earplugs should not be visible to someone looking at you from the front.</p>	
<p><b>2 Reusable</b></p> <p>Push-In Foam      Trust Fit™</p> 	 <p>While holding the stem, reach a hand over your head and gently pull the top of your ear up and back.</p>	 <p>Insert earplug so foam tip is well inside the ear canal. Use a gentle rocking motion while pushing earplug into ear canal to ensure a deep fit.</p>	 <p>If properly fitted, the tip of the earplug stem may be visible to someone looking at you from the front.</p>	
<p><b>3 Reusable</b></p> <p>Pre-Molded Push-In      SmartFit®</p> 	 <p>While holding the stem, reach a hand over your head and gently pull top of your ear up and back.</p>	 <p>Insert the earplug so all flanges are well inside your ear canal.</p>	 <p>If properly fitted, the tip of the earplug stem may be visible to someone looking at you from the front.</p>	
<p><b>4 Banded</b></p> <p>Tension Fit      QB2®HYG</p> 	 <p>Position band under your chin as shown above. Use your hands to press the ear pods well into the ear canal using an inward motion.</p>	 <p>Protection levels are improved by pulling your ear up and back when fitting as shown.</p>	 <p>In a noisy environment, lightly press the band inward with your fingertips as shown. You should not notice a significant difference in noise level.</p>	
<p><b>DOs and DON'Ts of Howard Leight Earplugs</b></p>		<p><b>Proper Fit</b> If either or both earplugs do not seem to be fitted properly, remove the earplug and reinsert.</p> 	<p><b>Removal</b> Gently twist earplug while slowly pulling in an outward motion for removal.</p> 	<p><b>Acoustical Check</b> In a noisy environment, with earplugs inserted, cup your hands over your ears and release. Earplugs should block enough noise so that covering your ears with your hands does not result in a significant noise difference.</p> 

### WEAR

- Read and follow all earplug fitting instructions.

### SELECTION

- Avoid overprotection in minimal noise environments – in selecting the best earplug for your situation, consider noise levels and your need to communicate with co-workers or hear warning signals on the job.

### MAINTENANCE

- Prior to fitting, inspect earplugs or ear tips for dirt, damage, or hardness. Discard & replace immediately if compromised.
- For proper hygiene discard disposable earplugs after use.
- With proper maintenance reusable earplugs should be replaced every 2-4 weeks. Push In Foam earplugs should be replaced every 5 days.
- Wash with mild soap/water, pat dry or air dry, and store in a case when not in use.
- Clean regularly and replace ear tip pods every 2-4 weeks on banded earplugs.

## THE ABC'S OF FALL PROTECTION

A typical Person Fall Arrest System (PFAS) incorporates three components, often described as the ABC's of fall protection. The anchorage connector, body support, and connecting device, when used together, form a complete system for maximum worker protection. But don't forget about the other components of any fall protection program; D: descent, rescue, and retrieval of a fallen worker, E: education, and F: fall protection for tools.

Fall Protection

**A**nchorage is a secure point of attachment. They must be able to hold fast under more than a ton of force generated in a fall.

**B**ody support harnesses distribute fall forces over the upper thighs, pelvis, chest, and shoulders. They provide a connection point on the worker for the PFAS.

**C**onnectors such as shock absorbing lanyards or self retracting lifelines connect a workers harness to the anchorage.

**D**escent and rescue devices are used to retrieve an injured worker or lower him to the ground.

**E**ducation is essential. We offer a variety of training and consultative services to fit your needs.

**F**all Protection for Tools helps make work environments safer and more productive by reducing dropped object incidents

## FULL BODY HARNESS APPLICATIONS

CSA STANDARD Z259.10 DIVIDES HARNESSES INTO 5 CLASSES:

### CLASS A

#### PERSONAL FALL ARREST

Class A full body harnesses are designed to support the body during and after the arrest of a fall.

### CLASS D

#### SUSPENSION AND CONTROLLED DESCENT

Class D full body harnesses are designed for suspension or controlled descent from a height.

### CLASS E

#### LIMITED ACCESS (EVACUATION)

Class E full body harnesses are designed to support a worker in a position that reduces the worker's profile during passage through a limited access area.

### CLASS L (LADDER)

#### LADDER CLIMBING

Class L full body harnesses are designed for use with fall restrict systems involving the use of a fall arrester that travels on a vertical lifeline or rail.

### CLASS P

#### WORK POSITIONING

Class P full body harnesses are designed to position a worker during a work operation.

## TYCHEM® 6000 SERIES COVERALLS

- A proprietary barrier laminated to a Tyvek® substrate
- Strong and lightweight, with broad chemical barrier
- Used for protection from chemical warfare agents
- Widely used by military first responders for weapons of mass destruction situations
- Taped seams, attached hood (respirator fit), front zipper closure, storm flap, elastic wrists and attached socks
- Colour: Grey
- Ankle Type: Sock
- Available in sizes small to 4X-Large

SAS200

**Applications:** Because Tychem® 6000 garments are only available with respiratory fit hood, storm flap and taped seams, these garments are intended for domestic preparedness situations where the potential for exposure to chemical warfare agents exists. When the hazard assessment consists of potential for exposure to the FBI's Toxic Industrial Chemicals most likely to be used in a terrorist threat, we suggest consideration of Tychem® CPF 3 or higher protection since permeation data is available on a much broader spectrum of chemicals including chemical warfare agents.

## THE GLOBALLY HARMONIZED SYSTEM (GHS)

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS) is an international system established by the United Nations to replace pre-existing classification and labeling methods. GHS presents a unified code to eliminate discrepancies in labeling conventions from one country to another. Using a harmonized standard reduces the chance of misinterpretation or confusion, thereby increasing safety regardless of the language spoken or even the level of literacy of those working with the substances.

It covers the following:

- Classification of physical health and environmental hazards
- Labeling environments
- Universal symbols and pictograms
- Hazard warning statements, aspiration hazards
- Signal word for type of hazard
- Safety data sheet format

The risk of chemical exposure lurks at any stage; be it production, transport, handling or use. Incomplete or ambiguous data can be not only dangerous but have a negative impact on productivity. As such, GHS is designed to protect the environment as well as workers, consumers, transport workers, and emergency responders.

One of the other aims of GHS is to improve and expand international knowledge of the chronic health hazards of chemicals and thereby reduce, eliminate and/or replace these chemicals. Due to the complex nature of this domain, the GHS is constantly being modified and revised. Effective date is proposed to be two years after publication of final rule passage by Congress. For this reason, it's important to contact one of our experts to stay abreast of the latest GHS developments and how they affect you.

## CUSTOM GHS LABELS

CREATE YOUR OWN LABELS TO CONVEY HAZARD CLASS INFORMATION.

### How to Order:
