5517 PYROPLEX® BLUE #2

- Maintains mobility while building tack and adhesion when faced with water contamination
- The Hydro-Activated technology helps it resist softening and washout when exposed to wet conditions on a continued basis
- The extreme pressure and anti-wear additives promote extremely long bearing life
- In high temperature environments, it adheres to metal surfaces and provides a strong barrier of protection for critical components
- Because it stays in place, there is less need to add grease, which equals less grease usage and extended lubrication intervals
- Multifunctional use for both on and off road
- Superior rust and oxidation control
- Dependable performance under varying conditions reduces maintenance costs while extending equipment life
- Does not use antimony, barium, lead, or chlorinated compounds, reducing environmental impact

AG347

5877 PYROPLEX® GOLD #2

- Uniquely formulated, semi-synthetic, aluminum complex grease that excels in heavily loaded construction, mining and industrial equipment where extreme operating conditions prevail
- Extreme pressure and anti-wear performance especially in highly shock loaded areas
- 6% molybdenum disulfide solids
- Semi-synthetic basestock for unique cold flow and pumping capabilities
- Excellent thermal stability with a high dropping point
- Enhanced "stay in place" technology with hydro-activated polymers providing very low water spray-off rates
- Aluminum complex thickener
- Will excel in multiple bearing applications, sliding applications, bucket pins, highly shock loaded areas, and asphalt paver auger bearings where extreme pressure and high heat exist
- Has assured pumpability in most cold environments that eliminates the traditional approach of changing to a NLGI 1 grade in winter

SMARTWASHER®

SmartWasher® uses the process of **bioremediation** - the accelerated break down of organic compounds such as grease, grime, varnish, oil, carbon and other heavy industrial soils through the use of nonpathogenic microbes. The microbes, suspended in a fluid that re-circulates through the unit, literally **eat their way through soils**, converting them into harmless water and carbon dioxide (CO₂). The solution remains clean and usable, unlike traditional solvent-based systems where the solution becomes dirty and less effective over time. Disposal becomes a non-issue, as hazardous waste streams are eliminated.

JUST SAY NO!
